PROFESSIONAL SUMMARY

Results-driven Java Backend Developer with 2+ years of experience building enterprise-grade RESTful APIs and scalable backend services using Java, Spring Boot, and MySQL. Recently expanded into full-stack development and DevOps, independently designing, building, and deploying a complete production full-stack application (React/TypeScript frontend, Dockerized backend, CI/CD pipeline, cloud deployment). Currently pursuing AWS Certified Developer – Associate certification. B.S. in Computer Science (Northeastern Illinois University, 2024). Authorized to work in the U.S. without sponsorship.

PROFESSIONAL EXPERIENCE

Software Engineer (Remote) — Muscat Solutions & Systems Company LLC

Mar 2025 – Present

- Developed and maintained Java Spring Boot backend services supporting RESTful APIs and database-driven web applications
- Designed and implemented RESTful APIs for authentication, user management, and data processing features
- Designed relational database schemas and wrote optimized SQL queries in MySQL to support application features and improve performance
- Implemented secure backend logic and input validation to ensure application reliability and data integrity
- Collaborated with remote development teams using Git-based version control workflows and participated in code reviews

Software Engineering Intern — Revature

Oct 2024 – Jan 2025

- Built a Social Media Blog API using Java and Spring Boot with full CRUD functionality for user registration, authentication, and message management
- Integrated Spring Data JPA for persistence and entity mapping; implemented RESTful endpoints with Spring Web
- Designed a second backend API using Javalin and JDBC with raw SQL database interaction

PROJECTS

Employee Management System — Full-Stack Project | [Live Demo \(demo / demo123\)](#) | [GitHub](#) | [API Docs](#)

Java, Spring Boot, Spring Security, JWT, JPA/Hibernate, MySQL, React, TypeScript, Docker, GitHub Actions, CI/CD

- Designed and built a full-stack employee management system end-to-end — Spring Boot backend and React/TypeScript frontend — with role-based access control (Admin/Manager/Employee) enforced at both the endpoint and service layers
- Implemented a JWT authentication layer from scratch (custom filter chain, UserDetailsService) for stateless session security, plus self-service and admin-initiated password management
- Designed a task lifecycle state machine (Assigned → Started → Under Review → Done) with guards against invalid transitions, and full audit logging on every admin/manager action
- Wrote unit and integration tests (JUnit 5, Mockito) covering service-layer business logic and role-based endpoint authorization, including edge cases and failure paths; built a GitHub Actions CI/CD pipeline for automated build/test
- Containerized the backend with Docker and deployed the full stack to production — backend on Render, MySQL on Aiven, frontend on Netlify — configuring CORS, environment-based secrets, and SPA routing

EDUCATION

B.S., Computer Science — Northeastern Illinois University, Chicago, IL

May 2024

Associate Degree, Process Operations & Maintenance — National University, Sultanate of Oman Dec 2016

CERTIFICATIONS IN PROGRESS

AWS Certified Developer – Associate (DVA-C02) — Amazon Web Services · Currently Studying

TECHNICAL SKILLS

Languages	Java, C#, Python, JavaScript, TypeScript, HTML, CSS
Backend & Frameworks	Spring Boot, Spring Security, Spring Web, Spring Data JPA, Javalin, RESTful APIs, JWT, BCrypt, Hibernate
Frontend	React, TypeScript, Material UI (MUI), Axios, HTML, CSS
Databases	MySQL, SQL, JDBC, Spring Data JPA
DevOps & Deployment	Docker, GitHub Actions (CI/CD), Render, Netlify, Aiven (MySQL)
Cloud Platforms	AWS (DVA-C02 in progress)
Tools & Practices	Git, Maven, Postman, TDD, MVC / Layered Architecture, Agile
Soft Skills	Problem-solving, fast learner, cross-functional team collaboration, written/verbal communication
